

STATISTICS 2010

BEEF

September 2011

Statistics for beef and veal 2010

This publication is the yearly statistics in English on the Cattle and Beef Sector in Denmark for 2010 and nearest previous years. For EU there are figures for each country concerning cattle herd, slaughtering of cattle, and beef and veal production, as well as prices for adult cattle.

The main sources of information for Denmark are figures from The Statistics Denmark and The Danish Agriculture and Food Council, and for EU information from EUROSTAT and EU Commission is used. Totals does not always sum due to rounding.

The specified consumption of meat in the statistics is quantities available for consumption. It is expressed as meat with bones, and is calculated on basis of production; added import, subtracted export, and adjusted for changes in stock. Statistics Denmark has calculated the consumption of beef and veal meat per capita without edible by-products to 28.8 kg in 2010. The actual consumption of beef and veal meat will be significantly lower, as bones, waste etc. are not deducted. According to Gfk ConsumerScan, household's panel consumers purchase 6.4 kg per person in 2010 in shops as cuts, minced beef, and veal, compared to 6.7 kg in 2009, and 6.5 kg in 2008. The consumption is however higher, as beef in sausages and other processed product are not included, and neither is eating out in restaurants, canteen, etc.

Collection, collation and editing of the Danish Agriculture & Food Council on behalf of the Danish Livestock and Meat Board – trade organization for the beef and veal sector .

Consumption, 1,000 tonnes 3)	128.3	150.3	153.5	159.5	103.9
Per capita consumption, kg 4)	24.0	27.3	27.8	28.8	103.6
Self-sufficiency, pct. 5)	132.9	91.6	89.4	89.0	
Beef and veal consumption in pct.					
of total meat consumption	21.2	30.2	31.5	32.9	

*) Preliminary

1) Exc. of condemned animals.

2) Total trade with live animals and beef and veal calculated by Statistics Denmark. The trade is bone-in equivalent and comprising beef in mixed products. The published figures over imports and hereby also consumption for 2009 are estimated to be too low, and are therefore increased with 11,000 tons by the Danish Agriculture and Food Council.

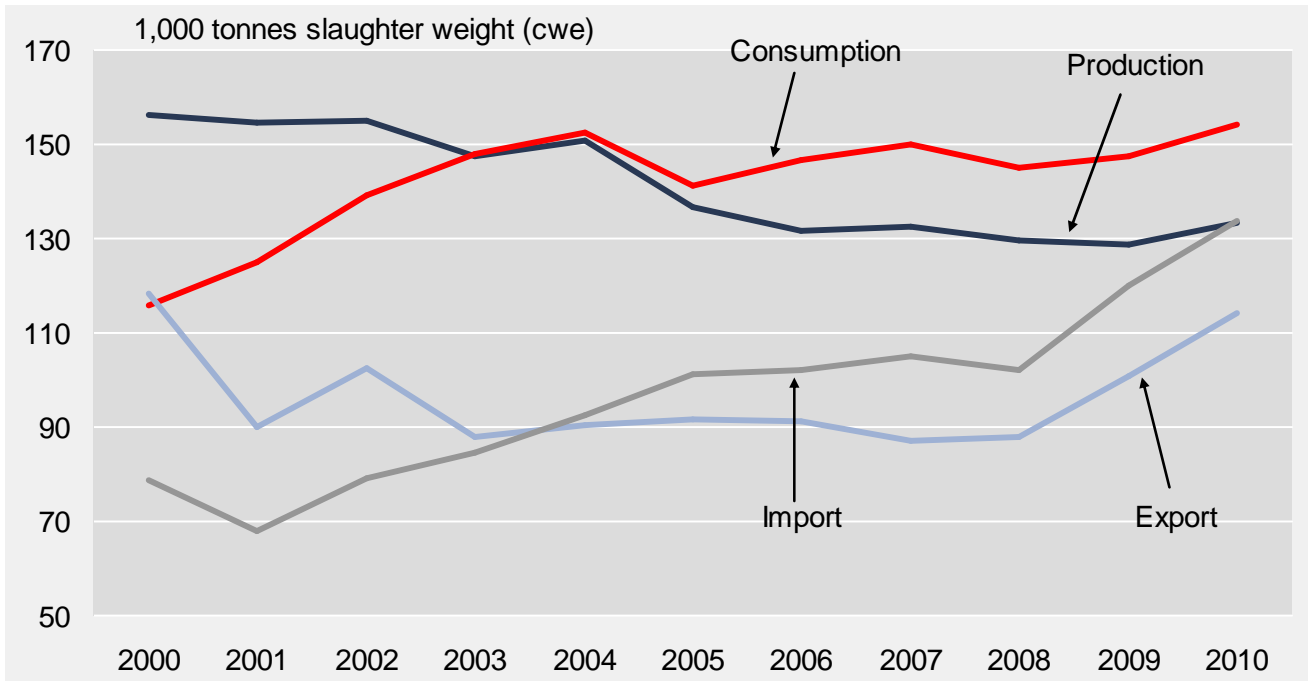

3) Consumption is quantities available for consumption calculated as: Stocks (start of year) + production + imports ÷ exports ÷ stocks (end of year).

4) The actual consumption is markedly lower as bones, waste etc. have to be deducted.

5) Self-sufficiency pct. = Production x 100/consumption.

The Danish Agriculture & Food Council is a trade association representing agriculture, the food and agro industries. With annual exports in excess of DKK 100 billion and with 145,000 employees, we represent one of Denmark's most important business sectors. Through innovation and promotion of the industry's contribution to society, we work to ensure a strong position for our members in Denmark as well as in international markets.
